

# URKIMIX SERIE 500

## MORE THAN A REFINISHING TINTING SYSTEM

BESA supplies Serie 500 to bodyshop and professional painters. This tintometric system was specially designed for repainting cars and uses highly concentrated colour bases that are mixed using different binders to achieve products that can be used in one or two stage systems.

Serie 500 is the colour system that best adapts to your needs. Unlike other systems available in the market, Serie 500 lets you work with HS or MS products, depending on the requirements and demands of the painter.

Serie 500 optimizes the number of coats applied and therefore increases bodyshop productivity.

Serie 500 is designed to make application and retouching easy. It can be used to spot repairs, panels and for complete car repainting.

BESA has specially developed for USA and CANADA two binders that comply current VOC 3,5lb/gal legislation.

Regardless of the binder chosen, this system achieves outstanding vehicle finishes with perfectly matched colours.

**Unlike other systems, SERIE 500 lets you work with HS or MS products.**

**23.500 formulas are available with over 8.000 in colour samples.**

### COLOUR BASES

Serie 500 has 68 colour bases that can be used to create every vehicle colour in the world. There are 35 solid colours, 10 metallized, 20 pearl, and 3 Xirallic.

All pigments are non-toxic and are highly resistant to UV light.

### COLORIMETRY

One significant advantage of URKI-MIX Serie 500 with regard to many other systems available in the market is the care taken by BESA's colorimetry department. Mixing paint accurately is one of a bodyshop's most important tasks, and BESA works to ensure that the end result is of the highest quality.

The URKI-MIX colour chart is a high precision tool for the professional painter. Each sample has been hand-painted to reproduce the colour faithfully.

23.500 colour formulas are available with over 8,000 in colour samples.

Each month client formulas are updated via the internet, and colour samples are updated twice a year.
